

**Extra Practice****Subtract.**

22.  $13 - 17 = -4$

Homework Help →

$$13 - 17 = 13 + (-17)$$

$$= -4$$

23.  $27 - (-8) = 35$

$$27 - (-8) = 27 + 8$$

$$= 35$$

24.  $-8 - 9 =$

25.  $-34 - (-20) =$

26.  $15 - (-14) =$

27.  $-27 - (-33) =$

**Evaluate each expression if  $f = -6$ ,  $g = 7$ , and  $h = 9$ .**

28.  $f - 6$

29.  $h - f$

30.  $g - h$

31.  $5 - f$

32.  $4 - (-g)$

33.  $-8 - (-h)$

**34. PS Be Precise** To find the percent error, you can use this equation.

$$\text{percent error} = \frac{\text{amount of error}}{\text{actual amount}} \times 100$$

Bryan estimates the cost of a vacation to be \$730. The actual cost of the vacation is \$850. Find the percent error. Round to the nearest whole percent if necessary. Is the percent positive or negative? Explain.

# Power Up! Test Practice

35. Determine if each statement below about integers is *always* true or *sometimes* true.

- a. positive  $-$  positive = positive  Always True  Sometimes True
- b. positive  $+$  positive = positive  Always True  Sometimes True
- c. negative  $+$  negative = negative  Always True  Sometimes True
- d. negative  $-$  negative = negative  Always True  Sometimes True

36. The table shows the record high and low temperatures recorded in different states. The *range* of temperatures in a state is the difference between the highest and lowest temperatures. Sort the range of temperatures for each state from least to greatest.

State	Alaska	Colorado	Florida	Nevada
<b>Record High</b>	100°F	118°F	109°F	125°F
<b>Record Low</b>	-80°F	-61°F	-2°F	-50°F

	State	Range
Least		
Greatest		

## Spiral Review

Multiply.

37.  $18(10) =$  \_\_\_\_\_

38.  $15(13) =$  \_\_\_\_\_

39.  $12(30) =$  \_\_\_\_\_

Evaluate each expression.

40.  $|-12| =$  \_\_\_\_\_

41.  $|-3| + |-5| =$  \_\_\_\_\_

42.  $|-25| \div 5 - |-3| =$  \_\_\_\_\_
